

GUIDANCE INFORMATION

The tissue recovery Case Report Form (CRF) is used to abstract data during tissue procurement activities. This document should be completed per case and shall serve as the source document for capturing all respective data. All questions are expected to be completed, even if the answer is "unknown" or "Not Applicable". The form is divided into five sections. Special instructions, per section/question, are noted in italicized text.

All times (hr:min) go by the 24 hour clock.

The earliest time noted should be the GTEx Procedure Start Date/Time. In the case of an Organ Procurement Organization (OPO), this should reflect the earliest timepoint a tissue was removed for GTEx purposes. Note: this will be entered as separate date and time fields into the Comprehensive Data Resource (CDR).

Any non-consent issue related to, or creating, a limitation on what tissues can be procured, should be noted in the appropriate kit comment box: "Additional Yellow Kit Comments" box (1); "Additional Green Kit Comments" box (1); or "Additional Aqua Kit Comments" box (2). Information about specific biospecimens should be captured in the Tissue Recovery Form (TRF) comments field associated with the specified tissue. This includes additional notes from Biospecimen Source Site (BSS) pathology teams, recovery team observations, tissue process deviations, etc.

	Case [Deta	ails		
Case ID (<i>GTEX-######</i>)	Collection Type (check one)	0 0	Postmortem Organ Donor	BSS Name (free text)	

Tissue Collection Data Procedure start time should reflect time first tissue removed. For OPO donors, start time is the earliest time of GTEx tissue removal.									
GTEx Procedure Start Date / Time (mm/dd/yyyy hr:min)		Chest Incision Time (hr:min)		Clamp/Ligature Time (hr:min) (if applicable)
